16"	139.20	86.10	136.60	
Fire Hydrants	\$13.92	\$8.61	\$13.66	

D. Notes

- 1. Applicability:** See Chapter 2 of [Denver Water's Operating Rules](#)
- 2. Payment:** Bills are due and payable to Denver Water upon issuance. Monthly bills are delinquent 20 days after the billing date. Late charges will be assessed per Denver Water policy.
- 3. Single Family AWC:** A customer's average winter consumption (AWC) is used to determine the tier 1 threshold. The AWC is determined by averaging the customer's monthly water consumption on bills dated January, February and March, which is a way of determining essential indoor water use. Denver Water has set the tier 1 minimum threshold at 5,000 gallons and a maximum of 15,000 gallons. For example, if the customer's AWC is less than 5,000 gallons, tier 1 is 0 to 5,000 gallons. If the AWC is over 15,000 gallons, tier 1 is 0 to 15,000 gallons. Volume rates are applied to actual monthly usage.
- 4. Nonresidential AWC:** The tier 1 threshold is based on each customer's average winter consumption (AWC). This represents demands during the system off-peak period. The AWC is determined by averaging the customer's monthly water consumption on bills dated January, February and March. Volume rates are applied to actual monthly usage. Tier 2 is equal to 4 times the customer's AWC. Tier 3 is for usage in excess of 4 times the AWC.
- 5. Small Multifamily:** For 2016, the small multifamily class (duplex through 5-plex) is now included in the nonresidential class.

Denver Water
